1-MINUTE (60s) AI VIDEO PRODUCTION MASTER BLUEPRINT

The 6-Scene, 12-Shot Mathematical Architecture, Full Prompt Suite & Flowchart

Standard Operating Procedure for Google Flow Studio, Veo 3.1 Fast, Gemini Omni Flash & Zero-Cost Pipeline

1. The Mathematical Law of 1-Minute AI Videos

Generative video models (Google Veo 3.1, Gemini Omni Flash 1.1, Seedance, MiniMax) cannot produce a continuous 60-second video from a single prompt. Doing so causes severe temporal collapse, facial drift, and melted objects.

The Universal 6×10-Second Modular Architecture: A 1-minute (60.0s) video is composed of exactly **6 structured scenes of 10.0 seconds each**. Each 10-second scene is built from **2 connected shots** (Shot 1 [4.0s] + Shot 2 [6.0s]), totaling **12 individual shots**.

2. The 6-Scene Narrative Structure (60 Seconds)

Scene #	Timeline	Narrative Purpose	Shot Structure	Narration Word Budget
Scene 1	0:00 – 0:10	The Hook & Problem	SH1 (4s Close-Up) + SH2 (6s Action)	Max 25 words (Hook in first 2s)
Scene 2	0:10 – 0:20	Agitation & Context	SH1 (4s Medium) + SH2 (6s Push-In)	Max 25 words (Deepen tension)
Scene 3	0:20 – 0:30	Turning Point / Reveal	SH1 (4s Wide) + SH2 (6s Reveal Orbit)	Max 25 words (Introduce hero solution)
Scene 4	0:30 – 0:40	Core Benefit / Transformation	SH1 (4s Detail) + SH2 (6s Tracking)	Max 25 words (Show product in action)
Scene 5	0:40 – 0:50	Climax & Social Proof	SH1 (4s Reaction) + SH2 (6s Wide Hero)	Max 25 words (Emotional peak)
Scene 6	0:50 – 1:00	Resolution & CTA	SH1 (4s Packshot) + SH2 (6s Calm Hold)	Max 20 words (Calm last 3s for logo)

3. Step-by-Step 8-Stage Production Flowchart

- **STAGE 1 (Lock Sheet):** Lock style string, 3-5 color anchors, aspect ratio (9:16 or 16:9), and voice talent.
- **STAGE 2 (Audio-First Script):** Write voiceover script capped at 120-135 words (2.5 words/sec). Generate voice track using Edge-TTS or Gemini Omni ($0.00).
- **STAGE 3 (Keyframe Generation):** Create 6 initial still keyframes (Prompt 1) using Nano Banana 2 Lite or FLUX.1 Schnell. Store in `website/public/images/keyframes/`.

- **STAGE 4 (Shot 1 Video):** Feed Keyframe 1 into Veo 3.1 Fast or Gemini Omni as start frame with Prompt 2 (Motion). Output 4.0s clip.
- **STAGE 5 (Tail Frame Extraction):** Extract exact last frame of Shot 1 via FFmpeg (`ffmpeg -sseof -0.1`) into `website/public/images/tails/`.
- **STAGE 6 (Shot 2 Chained):** Pass extracted tail frame as starting frame for Shot 2 (6.0s) to guarantee zero character or lighting jump.
- **STAGE 7 (Repeat for Scenes 2 to 6):** Produce all 12 shots following the exact 4s+6s chained formula.
- **STAGE 8 (Master Assembly & Audio Mix):** Losslessly concatenate all 12 clips into 60.0s master and mix voiceover with -12dB music ducking.
